

# REGIONAL INITIATIVES

**GEO's regional initiatives provide the necessary framework for countries and organizations to access and leverage on-going EO-based initiatives, creating synergies and minimizing duplication.**

## **AfriGEOSS**

AfriGEOSS is enhancing Africa's participation in and contribution to GEOSS. This participation contributes to the continent's efforts to bridge the digital divide, and to build a knowledge-based economy using GEO networks and the GEOSS infrastructure.

## **AO-GEOSS**

AO GEOSS aims to coordinate and make use of existing Earth observation infrastructure and resources to develop integrated and sustained observations and data sharing.

## **AmeriGEOSS**

AmeriGEOSS reflects local, national and regional interests of GEO Member countries in the Americas for planning and implementing GEO activities and Initiatives. AmeriGEOSS increases institutional and individual capacity by engaging experts, stakeholders and decision makers at each level.

## **EuroGEOSS**

EuroGEOSS works to improve interoperability of European information systems in biodiversity, drought and forestry. It demonstrates added value to the scientific community and society by making existing systems and applications interoperable.
