

2nd GEOSS Portal Demo – Virtual Workshop

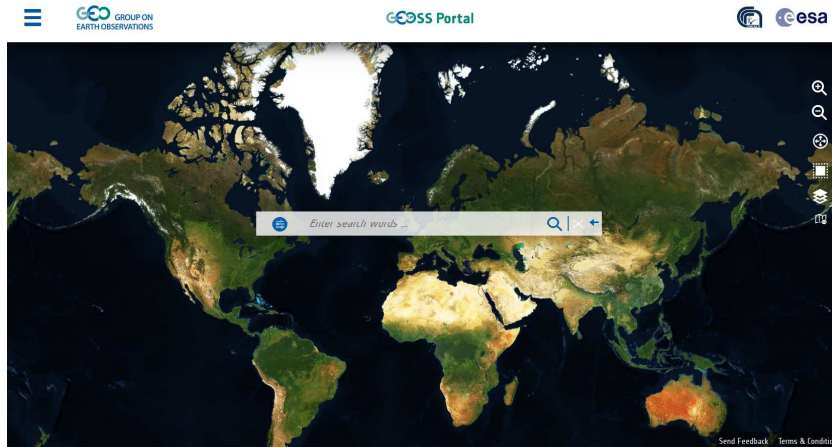

22nd March from 14.00-16.00 (GMT+1)

Accessing information from the Global Earth Observation System of Systems (GEOSS) has never been easier. The GEOSS Portal has undergone a transformation, to be unveiled in time for GEO’s Thirteenth Plenary.

The European Space Agency (ESA) in partnership with Consiglio Nazionale delle Ricerche (CNR) has built an intuitive interface to discover, access and use all of the ever-growing numbers of GEO-resources from a variety of providers all around the world.

Users can now perform temporal, thematic and geographic searches, allowing them to retrieve the resources they are looking for quickly and accurately. Keywords can be used to perform general searches and progressive filtering is applied to support users in refining and narrowing down their search results. A synthetic summary is presented of key metadata fields. Icon buttons help the user quickly assess the results' relevance.
